

## Lesson 7

### **Earth's Geodetics, Array of Wonder**

In this lesson we just need to bring their math, our math, our set of eyes and whatever system you choose to apply this math upon. We know who the teachers are now. Constants known and unknown have been found throughout this pyramid matrix on a global array. What other possible earthworks, pyramid-like structures await us to be discovered by this radian mathematics? What part do they play in all this? Is this global array of mathematics only found on Earth? We learnt in the last lesson that the top of the Great Giza Pyramid has a link to astronomy. Mathematics to prove a higher level of intelligence and I'll say this again – how could they have done this from not above ground level? The answer to which many argue because we've been lied to for so long in that "we're the only intelligent life forms in all of space and time". That time is no more and never was. Let's see what this matrix can show us even more. Where do we start? Whom do we ask? What would the curiosity of a cat lead us to?

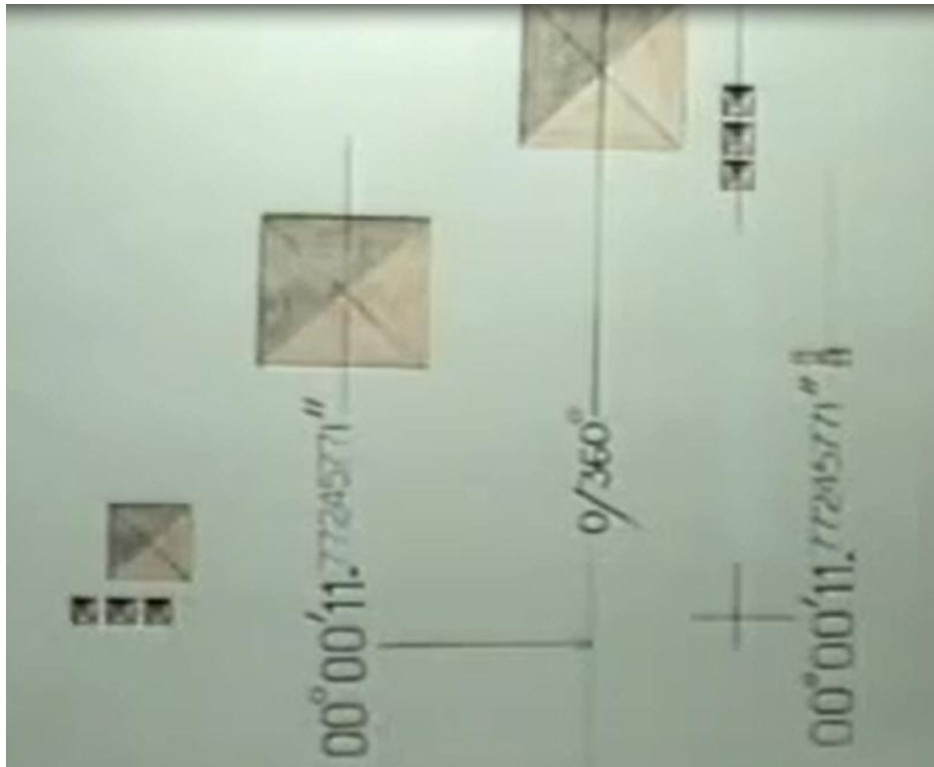

Figure 7.1 – Wikipedia picture of the Great Sphinx 1878

In the old word without excavation it is hard to see anything mathematically related to the Great Sphinx. Without maps of precise grid latitudes and longitudes perhaps we could not ascertain any of this pyramid matrix from her. I call it a "her" as I feel I've been reborn into a greater level of free knowledge where I don't have to spend a fortune to become educated in today's post secondary educational system – pending where one lives I suppose. Is the Great Sphinx just that; a teacher? All we have to do is ask right?

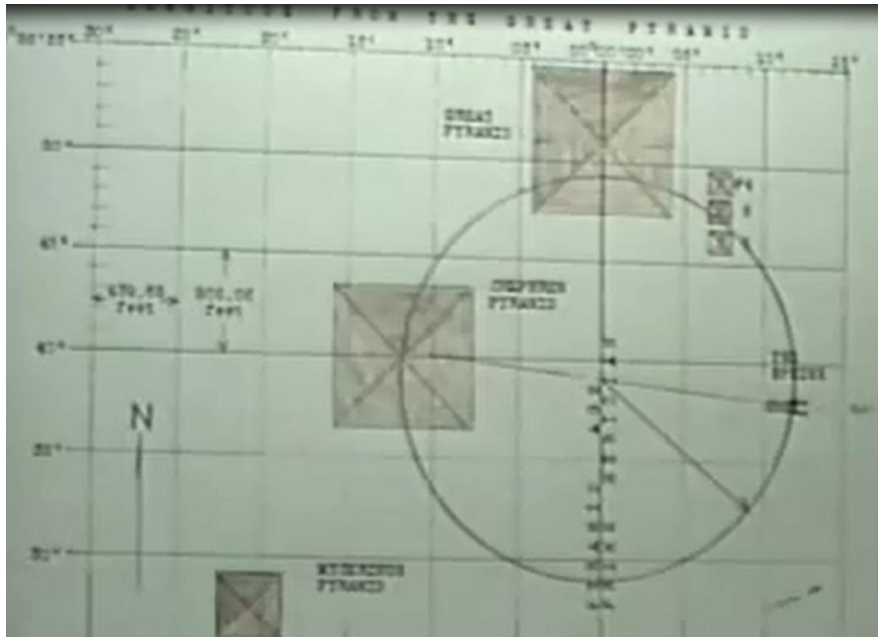

If we look at modern day maps and especially compared to Carl Munck's maps he used in his videos and books, we find that the great sphinx's longitude is exactly 10 times alternate Pi. The Khafre Pyramid on the other side of Greenwich/Prime Meridian AKA the Khufu Pyramid is echoed to the sphinx seen in figure 7.2.

Figure 7.2 – Carl illustration of the echoed longitudes of the Great Giza Pyramid

We find that the Great Sphinx is 10 times alternate pi “east” of the Khufu Pyramid and that the dead center base/apex of the Khafre Pyramid is also 10 times Pi “west” of the Khufu Pyramid of longitude. I mentioned I would show geometric shapes seen in the layout of these sites. We’ve found two besides the pyramid and triangle earlier explained seen in figure 7.3.

Figure 7.3 – Carl's illustration of the circle connection.

Do note that the north part of the circle passed through the center of the southern part of the Khufu Pyramid. Also recall that the grid latitude of the Great Pyramid (Khufu) passed through the middle of the base and apex much like what the circle is doing on the southern side. The apex grid latitude is left for a special purpose which was astrology the predecessor or astronomy. Let's look at the Great Sphinx for a moment seen in figure 7.4.

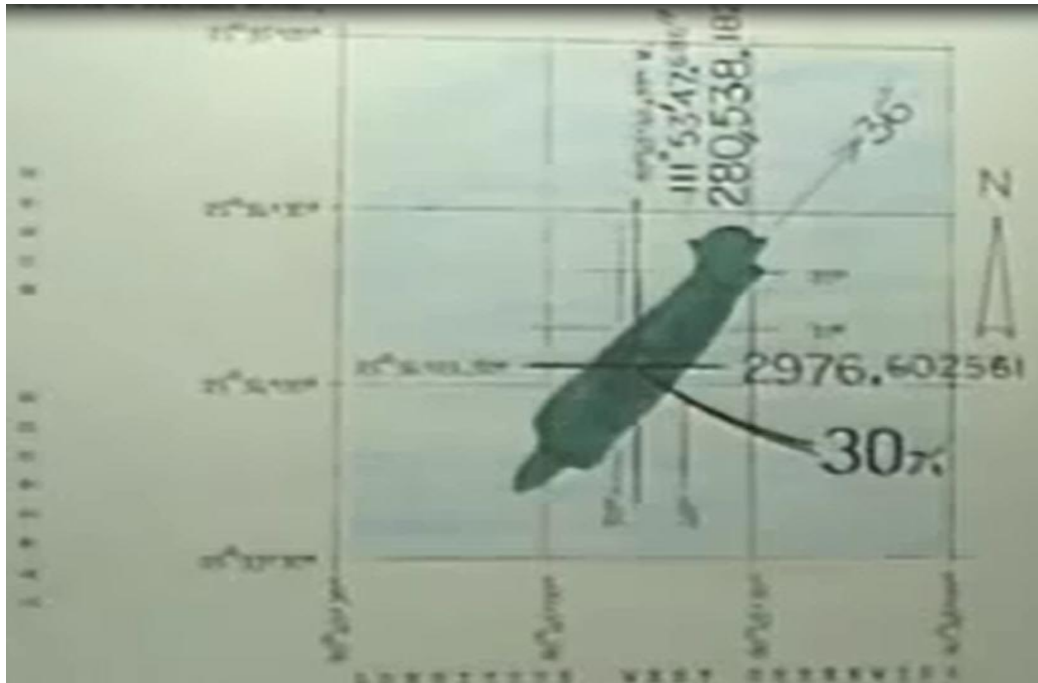

Figure 7.4 – Great Sphinx Google Earth

In Carl's video he claimed many people had their site maps screwed up, that is was difficult to work with the sphinx until he found the right positioning. I, unlike Carl have the privilege of using super advanced

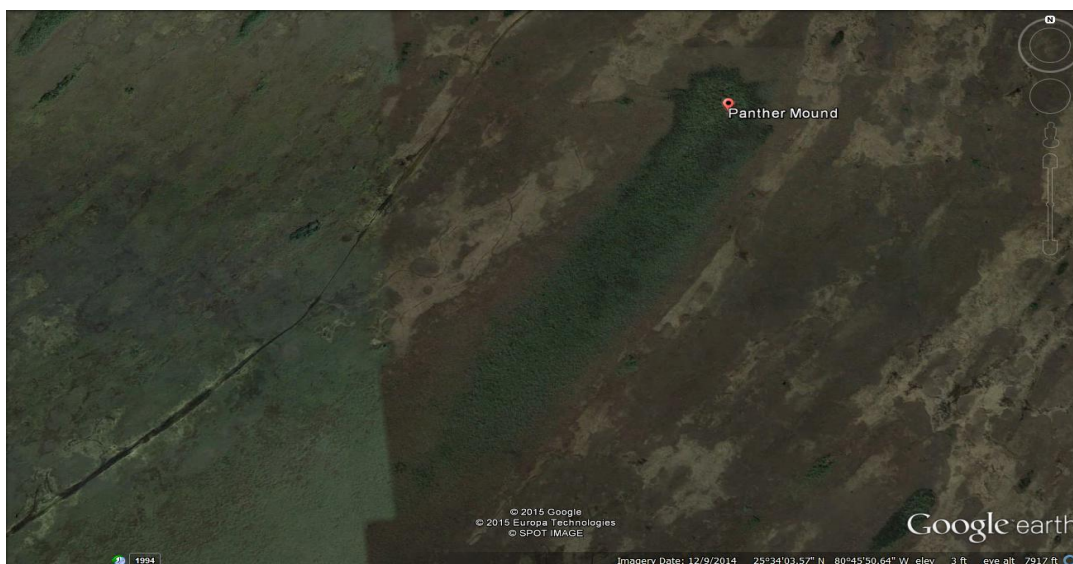

systems and software via Google Earth. The sphinx faces just south of east as he finally figured it out using an over head aerial shot. It lies on an azimuth of  $94.2477961^\circ$  which is also  $30\pi$ . How do we know this? Because Carl asked its mother; the sphinx is only a kitten and we found her mother over in Florida at Panther Point seen in figure 7.5.

Figure 7.5 – Carl's illustration of Panther Mound, Florida

Google Earth's Panther Mound picture seen in figure 7.6.

Figure 7.6 – Google Earth's Panther Mound

Panther Mound is 5500 ft long and we can put about 12 Giza's Sphinx's on it, with one in its tail. This effigy mound is located in the everglades. The panther's grid vector in the matrix is  $30\pi$ , dead center.

How did Carl/we figure this out?

The Radian (R)  $\times 30\pi = 5400$

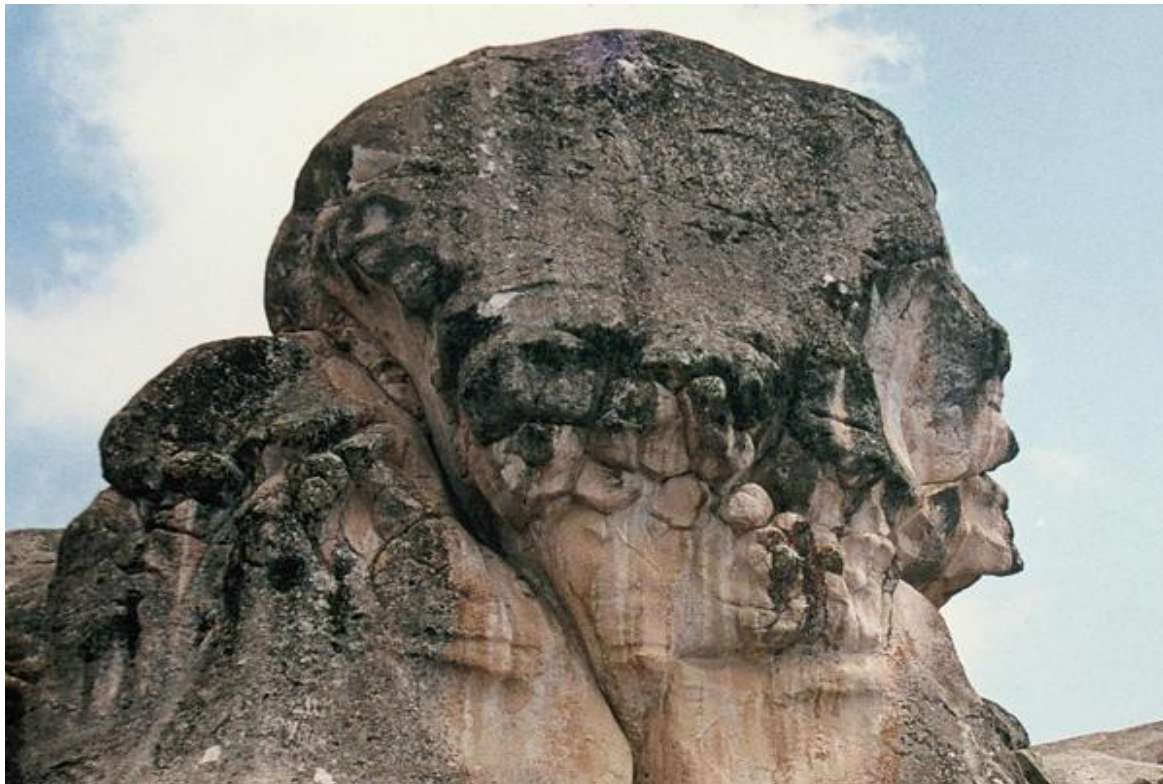

Multiply 11.7724577 (10xAP alternate Pi, found at grid longitude of the sphinx) = 63,571.27163

$/ 29^{\circ} / 58' = 37.79504^{\circ}$  its exact latitude north of the equator.

Some people that I've spoke to in the past about this, that did not watch Carl's videos etc... always said how? How did Carl figure out to do this? I could say it was just a matter of running the numbers through the mill or we could simply "see" for what the human head atop of a cat would tell us. Carl puts it perfectly again "The human head represent human intelligence while the body of a cat represents curiosity. We must exercise curiosity". After all, it's been best guess of what all these earthworks and sites are right? Is it not the time now especially after learning all this math to start asking other questions? Where else is there human heads on Earth? Do they know each other through this matrix? All we have to do is find one or two and ask.

There is this when searching for "human heads" in any search engine seen in figure 7.7.

Figure 7.7 Monument to Humanity – Markawaza, Peru

And then there's this one seen in Figure 7.8.

Figure 7.8 Old man of the mountain, White Mountain, New Hampshire, best seen from the north

And arguably the most exciting one (**which I'll need to prove still in the Pyramid Matrix**) is the face seen on Mount Machu Picchu, Peru seen in figure 7.9.

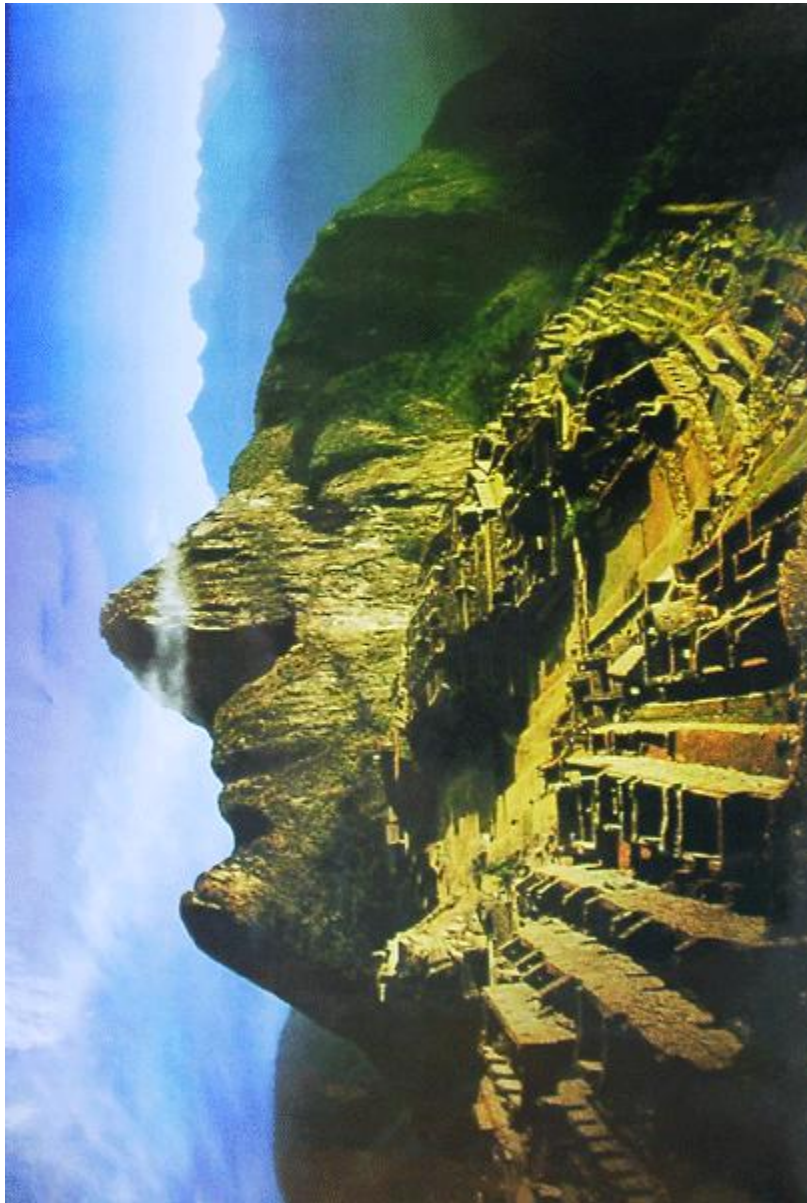

Figure 7.9, The face, Machu Picchu, Peru

Can you see it? Let's try flipping the picture 90° west seen in figure 7.10.

Figure 7.10 – Flipped at 90° Face at Machu Picchu, Peru

It's argued and the picture above has been cleaned up with technology via software. Reconstructed renditions images found all over the web, massive blogs and website to prove this a real face. I'll do my best to try and prove it in the matrix but I have another feeling as to why which I'll explain later if not found within the Matrix.

There is another face found through Carl Munck which is arguably known but more so known as Poverty Point where an ancient trading place resided (so the experts tell us). It plays in the matrix seen in figure 7.11.

Figure 7.11 Poverty Point, North Eastern Louisiana

Can you see the face? Take a look at the figure below in 7.12. Do note where I've drawn the outline like seen in Carl's illustrations is where the land slopes largely and not to follow the river precisely – maybe at one time the river was which wider, like the Nile in Egypt.

Figure 7.12 – The Face, Poverty Point, North Eastern Louisiana

Giant aren't they? Massive formations embedded into rock and earth in which resembles the human head and face. Are these all coincidences too? Poverty Point is well explained and proven to be within the matrix by Carl Munck. There was some point in time that the old man of the mountain had fallen into ruin and is or has been repaired. Someone knows the importance of this head/face and do note these earthworks and sites are untouched – almost. While some ancient sites have been destroyed by us, we can still get valuable information and to preserve the knowledge of their importance found within this matrix. I just can't help feel someone is protecting these sites.

Let's look at poverty point in which measured "trading circle" as archeologists put it that measures 3950ft in diameter (1 foot for every mile of the Earth's polar radius [http://en.wikipedia.org/wiki/Earth\\_radius](http://en.wikipedia.org/wiki/Earth_radius) ) holds more knowledge seen in John Gibson's illustration in figure 7.13.

Figure 7.13 John's Gibson illustration of Poverty Point

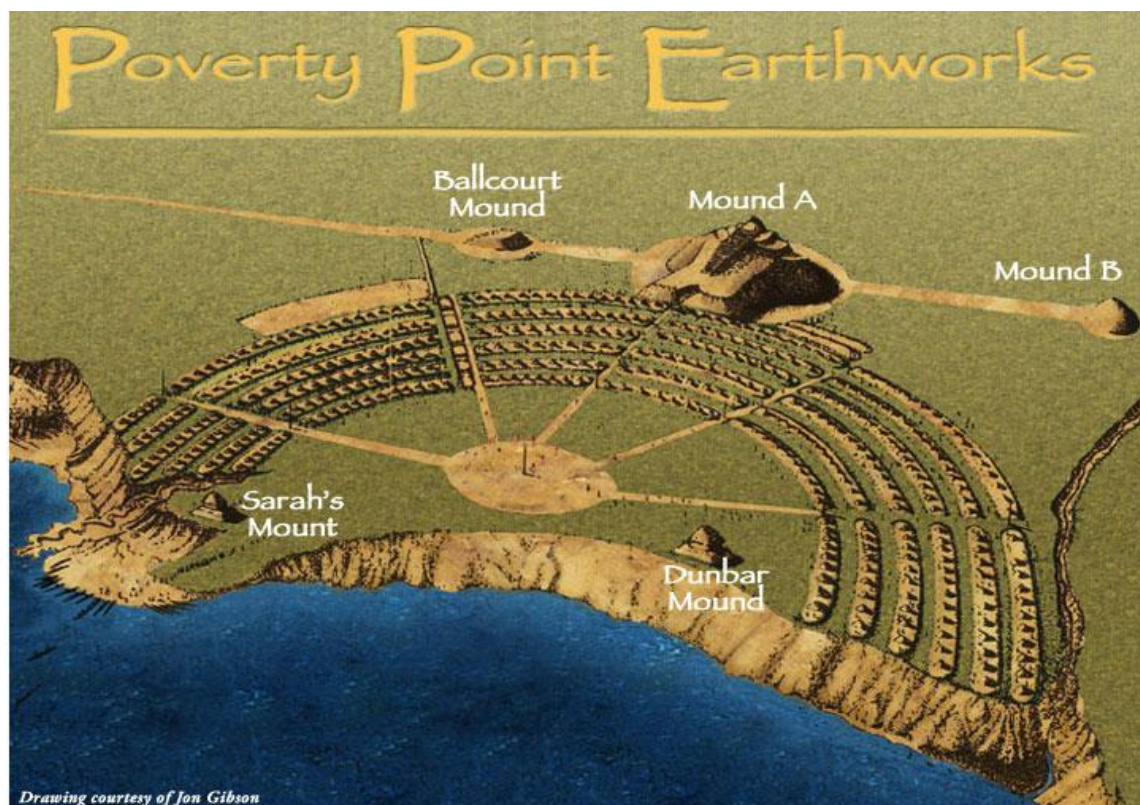

Figure 7.14 – Google Earth Poverty Point

Can you see the circles? Better defined in Figure 7.15.

Figure 7.15 Poverty Point visual of circles and earth works via Google Earth

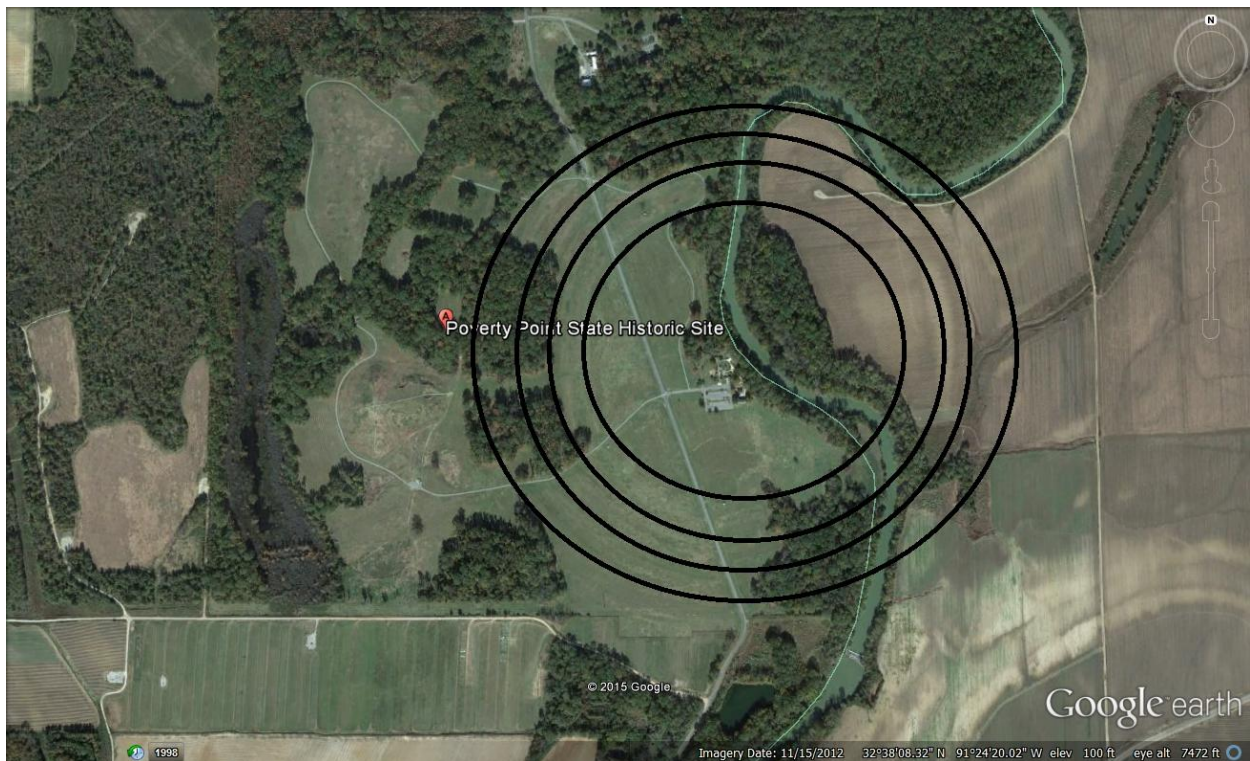

Figure 7.16 Carl Munck's illustration of Poverty Point

The “bird mound” seen on the western flank of the circles is measure around 700ft long and it’s latitude is 32° 38’ 06.119” N. When multiplied together they become 7,441.506402 the Surface Area of Stonehenge.

There is another large mound seen in the Google Earth pictures called the Motley Mound seen in figure 7.17 which is the “eye” in the face as seen in figure 7.12.

Figure 7.17 the Eye, Motley Mound – unfinished bird mound.

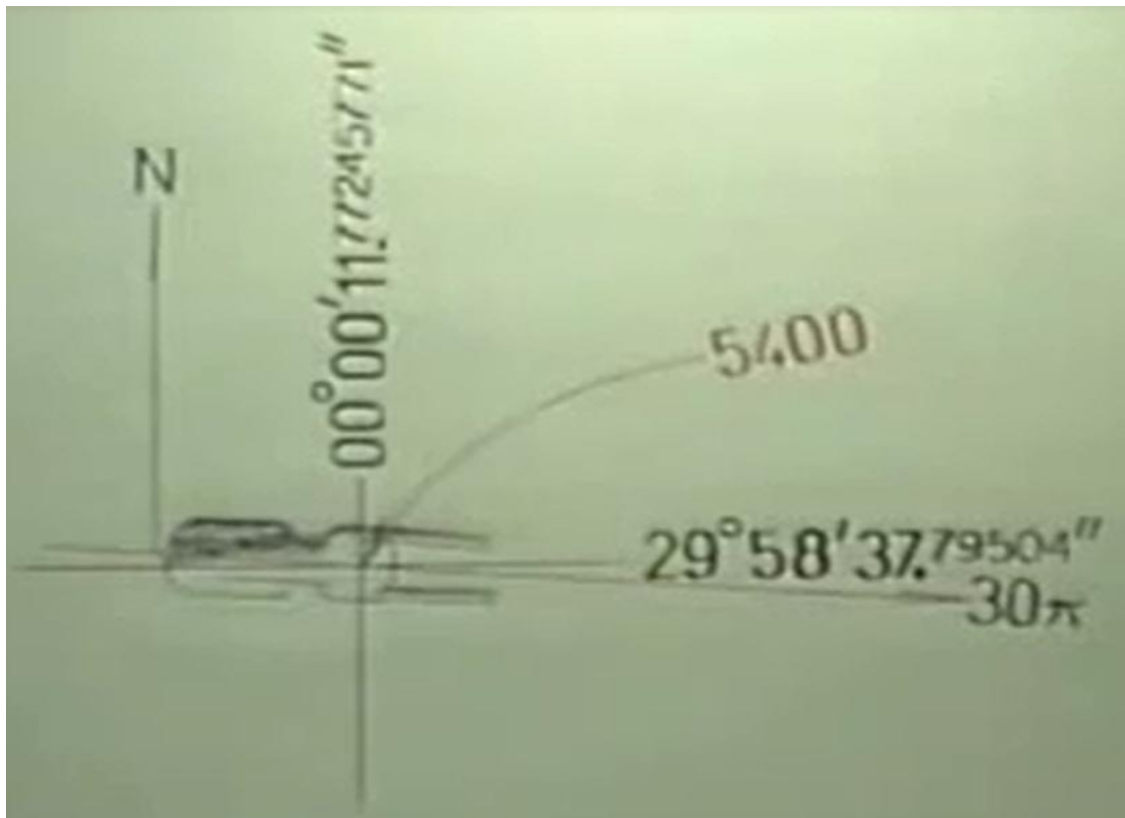

When we look at the coordinate of latitude at the eye we get  $32^{\circ} 39' 25.96''$  which when multiplied together we get 32,398.08 (32,400 as a whole number). Dead center vector in the matrix and is also  $1.909859317 = 1/30^{\text{th}}$  of the radian.

$R = 57.29577951$ , The radian / 30 = 1.909859317

If we look at 5400 (grid vector of the Great Sphinx)  $\times 1.909859317 = 10,313.24031$  the area of the  $360^{\circ}$  circle. Eye to eye, face to face, they speak geo-mathematics to each other through this matrix – vector to vector seeing in figure 7.18.

Figure 7.18 Carl's illustration of the Great Sphinx

Why did they build the Great Sphinx at grid vector 5400? Are there more structures and earthworks at other grid vectors? Yes.

$5400 \times 2 = 10,800$  = Emerald Mound's 5 sided mound

$5400 \times 4 = 21,600$  = Stonehenge

$5400 \times 5 = 27,000$  = Go Low Mound - Goloring

$5400 \times 6 = 32,400$  = Motley Mound

$5400 \times 24 = 129,000$  = Shark Mound

We see a rational relationship in grid vectors that apply to each other through the matrix of rational and irrational constants. We just have to ask the site the question don't we?

We found and already knew that when looking at arrangement by looking at the 4 circles or terraces at Cuicuilco showed us something of importance in the matrix. We used 5400 from the sphinx to proof these other site's grid vectors but what else can we find from the Great Sphinx like at Cuicuilco? The #4 representing 4 terraces is also accounted for at the Great Sphinx seen in an excavated picture in figure 7.19.

Figure 7.19 Great Sphinx's 4 Paws via Wikipedia

Looks a little more respectable now that she's out of the liter box of sand doesn't she? 4 paws when multiplied  $5400 \times \pi$  gives us 67,858.40131753.

$5400 \times 4\pi = 67,858.40132$  is  $/29^\circ / 58' = 40.343''$  which is the latitude of the Khafre Pyramid dead center.

$5400 \times 48.66934411 = 262,814.4582$  which answers the grid longitude of temple 4 of the Mayan Temples over in Mexico. The temple of the double headed serpent at Tikal Guatemala at 228ft high, seen in figure 7.20.
